### **Engineering Design Challenge**

#### **Criteria:**

Engineering design challenges are intended to encourage 4-H members to use the engineering design process to create their own projects. These projects should include an engineering notebook, journal or description which answer the following questions about their project. Projects without an engineering notebook will be judged accordingly. Projects with notebooks will place before projects without notebooks, journals, or description.

- What is the challenge or task of your project (Example: Throw a marshmallow six feet, incorporate technology into clothing, create alternative energy, design and build a rubber band powered car, etc.)
- Draw your design
- How did you test your design?
- What were the results?
- How did you change your design to improve it?
- Did you retest it? Did the results improve?
- Describe your final design and does it work?

Engineering Design Challenges will be judged based on creativity, design, function and recordkeeping (journal or engineering notebook).

**Juniors – Grades 3-7; Seniors – Grades 8-12**

### **Marshmallow catapult challenge design task**

Design a trebuchet-style swing arm catapult. It may be similar to a teeter-totter or swing set. The beam (arm) is able to swing (go up and down). The arm of the catapult must be adjustable from the center to an offset (One side of the beam is longer from center pivot point). Use at least five (5) different types of materials or parts (craft sticks, brads, dowels, etc.). Use weights and gravity as the power source. Catapult cannot be any larger than a 3 foot cube (3' x 3' x 3'). Launch a marshmallow at least six (6) feet. A journal or engineering notebook should be included to describe the creation, purpose and function of the device. Explain how you built and tested your catapult. Chart your marshmallow launches. **Rubber Band-Powered Vehicle Design Challenge**

Design a wheel-driven vehicle, powered only by one rubber band (size #64 approx. 1/4" wide by 3 1/2" long by 1/32" thick.), which will transport a one-pound "load" (box of baking soda approx. size: 3 1/2" x 4 1/2" x 2") at least 9 feet (on a smooth flat floor) while remaining within the boundaries of a 3 ft. wide parallel track (marked off with masking tape). Speed is not a criteria.

There are no restrictions on materials, size, weight or number of wheels. However, the only energy source permitted is the elastic energy of one rubber band. Commercially assembled vehicles are NOT permitted. However, commercially manufactured components may be used as parts of the vehicle. The vehicle must be self-starting (i.e., no pushing, external power starts, etc.). Propulsion of the vehicle must be through the wheels (i.e. no propellers, no launching mechanism). Transferring the energy of the rubber band to wheels via gears, fly wheels, etc., is encouraged. No remote-control devices are permitted.

A journal or engineering notebook should be included to describe the creation, purpose and function of the device. Explain how you built and tested your vehicle and if you made any modifications. Chart or graph collected data and explain how you measured improvements in your engineering notebook or journal.

### The Future of Agriculture Research Challenge Displays

The future of agriculture research displays will illustrate current research and forward/futuristic thinking that is changing the field agriculture and agricultural based careers. 4-H members will research current trends, future thoughts and ideas for continuing to effectively feed the world. These projects should have a minimum of three scholarly references identifying where and when the information was published. These projects may:

Describe the challenging need for increased food production for a growing population  
Describe a new agricultural production technique or an emerging agricultural technology that will

Illustrate a new vision for the future of agriculture  
Describe new STEM-based careers in agriculture

Research displays should use research-based information and resources to answer questions similar to the following. "What will the future of Agriculture look like?", "How will agriculturalist feed an ever-growing population?" or "What are future careers in agriculture?"

All research displays should be mounted on a free-standing display board not to exceed 3' x 4' when the sides are extended for display. ### **SECTION 305 – 4-H SCIENCE DISCOVERY PROJECTS**

**1st – \$8.00 2nd – \$6.00 3rd – \$4.00 4th – \$3.00 5th – \$1.00**

The goal of this project and exhibit is to allow 4-H members to:

Use the scientific method to gain an understanding of how things work and the variables that affect

Take an open and creative approach to problem solving.  
Learn that a successful outcome is based not on personal opinion but on scientific fact.  
Improve written and visual communication skills.

4-H members are encouraged to use their 4-H projects as the basis for their scientific research and discovery project. Exhibits should relate to one of the following topics:

- Behavioral & Social Sciences
- Biochemistry, Medicine, & Health Sciences
- Botany & Zoological Sciences
- Computer Science
- Earth & Space Sciences
- Engineering
- Environmental Sciences
- Mathematics
- Physical Sciences

A few resources for finding project ideas are:

WWW Virtual Library: Science Fairs – <http://physics.usc.edu/~gould/ScienceFairs/>

Information about Oklahoma Science Fairs – <http://ossef.ecok.edu/>

- à Displays must be free standing and are limited to 3' x 4' (width x depth) when sides are extended. Commercially available "Science Fair Presentation Boards" are encouraged.
- à Displays without reports will be judged accordingly. Displays with reports will be placed above those missing reports.

**Classes:**

1. Beginning Division (Grades 3-5) – A display illustrating the project.
2. Intermediate Division (Grades 6-8) – A display with an accompanying report of approximately two typewritten pages.
3. Advanced Division (Grades 9-12) - A display and a written report about the project that includes an interview with a scientist, science teacher or someone who is knowledgeable about the area that is being studied. (Example: a beekeeper could help with bee projects.) Reports should be three (3) to five (5) pages in length.
4. Team Exhibit (All Grades) - Team may include a maximum of three members. A display and a written report about the project. It is recommended that it includes an interview with a scientist, science teacher or someone who is knowledgeable about the area that is being studied. (Example: an engineer could help with engineering projects.) Reports should be three (3) to five (5) pages in length.

**SECTION 306 – 4-H DESIGN AND CONSTRUCTION**

Fall 2020 – All Design and Construction projects will be REQUIRED to have the Skill Mastery Sheet securely attached to the project. Use a safety pin and attach directly to the exhibit when at all possible. NEVER attach sheet to a hanger! The sheet MUST be completed by the 4-H member.

The Skill Mastery sheet <http://4h.okstate.edu/literature-links/lit-online/family-consumer-science/fabric/skill-mastery-sheets> is an education tool to guide project work. Click hyperlink "Sample Technique Cards" to find instruction for many of the techniques noted in the skill sheets (i.e. facings, zippers, hems, fasteners, etc.). Additional hyperlinks to skill sheets and technique cards provided throughout categories. Fair exhibits have been carefully selected and directed for members to investigate and learn specific skills/information and to demonstrate mastery of these skills/information. The end product/exhibit is being evaluated on the skills "learned/mastered." The skill sheet serves as a member's "personal reflection" and communicates to the judge what was learned. Why is this important? Because in 4-H, the reflection and application of what was learned is more important than the end product/exhibit.

The skill sheet is to be used as a planning tool. It is important that each 4-H member take responsibility for the life skill of "learning to learn." This may require members, leaders and educators to look up terms and learn techniques as part of the educational process. Resources, instructions and project guides are posted online. Members are encouraged to seek out other valid resources which teach proper technique and knowledge in the areas of design and construction.

*General Skills to be mastered in project/product in ADC, IDC and HTDC:*

**Structural Design:** Construction technique, size, form, color and texture suited to the materials and product end use.

**Elements of Design:** The finished product illustrates the member is learning or "mastering the basic elements of design - lines, shapes or forms, textures, colors, and space.

**Principles of Design:** The finished product illustrates an awareness and application of the principles of

harmony, proportion, balance, rhythm and emphasis adding dimension, interest and/or appeal to the finished product.

**Surface Design:** Any lines, shapes, colors, textures, or materials applied to the product or item's design that creates an emotional or personal quality, individuality and creative expression without disturbing initial/end purpose/how it is used. Design is that something which makes the item unique to the individual designer.

**Reports/Descriptions/Expense Sheet/etc.** – Exhibits require a report/description/expense sheet of any kind, can be typed or neatly/legible hand written. Report should be one-two pages. If typed, it must be double spaced using a minimum of 12-point font. **Report MUST be SECURELY attached to the exhibit.**

A county may enter one (1) exhibit in each class. A 4-H member may enter one (1) exhibit per class.
